

Data analysis Binus University Workshop Day 4

https://osdoc.cogsci.nl/binus2022

Sebastiaan Mathôt

Today (day 4)

- Before the break
 - Preparing data from online experiments
 - Preparing data from lab experiments
 - From 'long' to 'wide' format
- After the break
 - Conducting a statistical analysis
 - Q&A and workshop end!

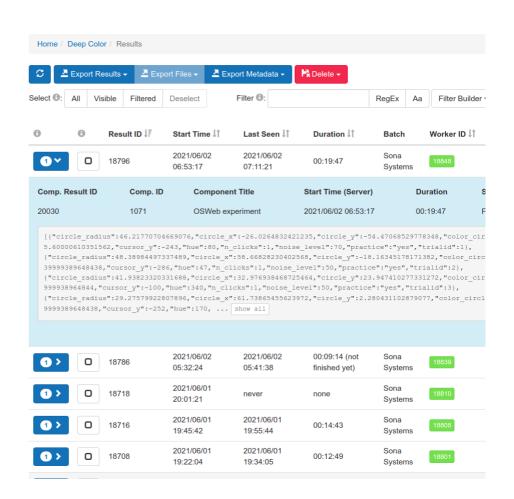

Preparing data from online experiments

JATOS results

- For online experiments, data is stored in JATOS
- Each session is one entry in the results
- Each result has a status
 - FINISHED → completed without error
 - FAIL → canceled or an error occurred
 - DATA_RETRIEVED or STARTED
 → started and still running
- Many non-finished results is normal

Exporting JATOS results

- Export (download) results from JATOS
 - Format: a text file
 (JSON) that is hard to work with
- Convert this to a spreadsheet with OpenSesame
 - xlsx
 - CSV

Possible subject numbers	0,1
	Make browser fullscreen
	Test experiment in external browser
Don't have a JATOS server? Visit <u>mindprobe.eu</u>	Export experiment as JATOS study
	Convert JATOS results to csv/ xlsx
	ightharpoonup Include JATOS context information
Compatibility check More information	No problems detected
Version	1.4.7.0

What does the data look like?

- The data is now in 'long format'
 - One row → one trial (or strictly: one logger call)
 - One column → one variable (response time, conditions, etc.)

Preparing data from lab experiments

OpenSesame data files

- For each participant,
 OpenSesame creates a log file
 - long format
 - .csv

	Downloads	×	sub	ject-data		×
Name			₩	Size	Modified	
subject-1.csv				564.9 kB	14 Nov 2018	7
subject-2.csv				567.8 kB	14 Nov 2018	7
subject-3.csv				559.6 kB	14 Nov 2018	7
subject-4.csv				566.8 kB	14 Nov 2018	7
subject-5.csv				567.3 kB	14 Nov 2018	7
subject-6.csv				520.2 kB	14 Nov 2018	7
subject-7.csv				565.8 kB	28 Nov 2018	7
subject-8.csv				568.4 kB	14 Nov 2018	7
subject-10.csv				568.3 kB	14 Nov 2018	7
subject-11.csv				567.1 kB	14 Nov 2018	7
subject-12.csv				562.0 kB	14 Nov 2018	7
subject-13.csv				573.7 kB	14 Nov 2018	7

Merging data files

- You generally need to merge data
 - From multiple participant data files
 - Into a single data file
- There are many ways to do this
- I will demonstrate a simple Python script[1]

What does the data look like?

- The data is now again in long format
 - One row → one trial (or strictly: one logger call)
 - One column → one variable (response time, conditions, etc.)

From 'long' to 'wide' format

From 'long' to 'wide' format

- There are different ways to organize data
 - long format is most common
- Statistical software often expects a specific format
 - Such as 'wide' format
 - In JASP, SPSS, etc.

Wide format

- Wide format is an aggregated format
 - It results from averaging
 - One row corresponds to one participant
 - One column corresponds to one condition
 - Cells correspond to means of a dependent measure (e.g. mean RT)

Pivot tables

- A pivot table is a tool to go from long to wide format
- In spreadsheet software
 - Excel
 - LibreOffice Calc
 - Google Sheets
- Or programmatically
 - Python DataMatrix
 - Python Pandas
 - R

Statistical analysis

JASP

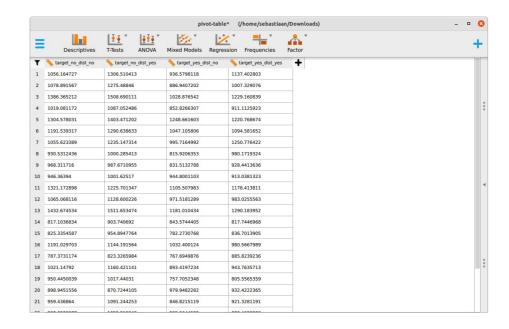

- JASP is free software for statistics[1]
 - Graphical user interface
 - Based on R

JASP

- Modify the pivot table
 - One row with column headers
- Open in JASP
- Conduct Repeated Measures ANOVA

Let's get to work!
